Abstract
The explosion of information about Ebola requires rapid publication, transparent verification and unrestricted access. I urge everyone involved in all aspects of the Ebola epidemic to openly and rapidly report their experiences and findings.

Editorial
In addition to all the formidable challenges we are confronting with the Ebola epidemic, the information challenge is of no less significance than all the others. Within the exploding growth of the epidemic itself there is an explosion of information that requires rapid publication, transparent verification and unrestricted access. This information includes organisational and logistical experiences, transmission narratives, presentation, methods of recognition, case histories, a range of orthodox and unorthodox interventions, clinical trials, biological and virological findings, and many more.

F1000Research is a publishing platform that combines immediate publication, transparent refereeing, and unrestricted open access, making it extremely suited to respond to these information challenges. F1000Research, has offered to publish free of charge a collection of reports and publications on all issues relating to the Ebola epidemic. All papers published by F1000Research are open access. I urge everyone involved in all aspects of this epidemic to openly and rapidly report their experiences and findings. Information will be one of our key weapons in defeating the Ebola epidemic.

This article is included in the Disease Outbreaks gateway.
The benefits of publishing with F1000Research:

- Your article is published within days, with no editorial bias
- You can publish traditional articles, null/negative results, case reports, data notes and more
- The peer review process is transparent and collaborative
- Your article is indexed in PubMed after passing peer review
- Dedicated customer support at every stage
