    }  
}
```

Supplementary Figure 1: Result in the JSON format of the AKT2 query from Figure 3. This is the count of AKT interactions with the Ensemble ID used for AKT2.

Example query results for */pathway/getInteractions* call for WikiPathways pathway 1544

```
{  
    "_about": "http://rdf.wikipathways.org/Pathway/WP1544_r75258/WP/Interaction/id28bfd47",  
    "inDataset": "http://www.wikipathways.org",  
    "source": {  
        "_about": "http://identifiers.org/ensembl/ENSG000000207875",  
        "inDataset": "http://www.wikipathways.org",  
        "type": [  
            "http://vocabularies.wikipathways.org/wp#GeneProduct",  
            "http://vocabularies.wikipathways.org/wp#Rna"  
        ]  
    },  
    "target": {  
        "_about": "http://identifiers.org/ncbigene/208",  
        "inDataset": "http://www.wikipathways.org",  
        "type": [  
            "http://vocabularies.wikipathways.org/wp#GeneProduct",  
            "http://vocabularies.wikipathways.org/wp#Protein"  
        ]  
    },  
    "type": "http://vocabularies.wikipathways.org/wp#DirectedInteraction"  
},
```

Supplementary Figure 2: Result in the JSON format of the pathway query from Figure 4. This shows a truncated result of the *getInteractions* call for WikiPathways 1544. It also includes the same participants as was used in the specific interaction call (*/pathways/interactions/byEntity*) with the participants being AKT2 and hsa-let-7b.

Python Workflow Example

The Python workflow can be found in GitHub as `OPS_workflow.py` at the following link https://github.com/RyAMiller/OPS_AppNote/tree/master

```
#!/usr/bin/env python3
